

P O N D
A N
A L M A N A C K

for the year of our
L O R D G O D

1673.

Being the first after Bissextile or Leap-Year
and from the worlds Creation at the
Spring 5676 years Compleat.

Amplified with many good things both
for pleasure and profit: and fitted for the
Meridian of *Saffron-Walden* in *Essex*
where the Pole is elevated 52 degrees and
6 minutes above the Horizon,

And may indifferently serve any other
place of this Kingdom.

C A M B R I D G E,

Printed by *John Hayes*, Printer to the
University, 1673.

The Common Notes and Moveable Feasts
for this year, 1673.

The Golden Number	this year is	2
The Cycle of the Sun		2
The Epact		22
The Dominical Letter		C
Shrove-sunday	Feb. 9	
Easter-day	March 30	
Ascension-day	May 8	
Whitsunday	May 18	
Trinity-sunday	May 25	
Advent-sunday	Novem. 30	

The fixed Feasts are those which never change their places but always keep the same day of the moneth. Of this sort are the Circumcision of Christ, the Epiphany, and all the other Feasts of the Saints and Martyrs, which were Ordained to be kept by the Primitive Christians, for a good and pious end, and ought still to be religiously observed, in remembrance of the Blessed Apostles, and Martyrs, whose memory shall never perish.

The Ember weeks are also of great Antiquity in the Church, they are four in number, containing the Wednesdays, Fridays, and Saturdays, next after the first Sunday in Lent, after the feast of Pentecost, after the 14 of September, and after the 13 of December, they were at first ordained for quarterly seasons of Devotion, wherein the ancient Christians put up their Prayers, and Supplications to Almighty God, that thereby the whole year might be blessed: others say they were called Ember days from the ancient custom of using Hair-cloth and Ashes in the time of Publick worship; on which days, in token of their Piety and Humiliation, they used to eat nothing untill the Eventide, and then onely a Cake baked under the Embers or Ashes, and from

Pond 1673.

from thence called Ember Bread. The Church of *England* observes now these days as a preparation for the Ordaining of Ministers, desiring of Almighty God that he would be pleased so to direct the Bishops, that they may make choice of such persons as may both by their life and doctrine set forth the glory of God, and endeavour as much as in them lies the salvation of all men.

The begin. and endings of the Terms, 1673.

Hilary Term begins January 23, ends February 12.

Easter Term begins April 16, ends May 12.

Trinity Term begins May 30, ends June 18.

Michaelmas Term begins October 23, ends Nov. 28.

Times prohibiting Marriage.

Marriage comes in on the 13 of January, and by Septuagesima-sunday it is out again until the Octaves of Easter; or Low-sunday; at which time it comes in again, and goes no more out till Rogation Sunday: for *Rogamen vetisat*: From whence it is forbidden again until Trinity-sunday; and from thence it is unforbidden till Advent-sunday. But then it is out, and comes not in again until *S. Hilary*, or the 13 day of January next after.

Ap 2. 17 2

Aquarius, or the waterman, is feigned by the Poets to be *Ganimedes* the Trojan, whom *Jupiter* for his excellent beauty carried into Heaven, and made him his Cup-bearer. Others think it to be *Deucalion* the son of *Prometheus*, whom the gods translated into Heaven, in remembrance of that mighty Deluge which happened in his time.

Pisces, or the Fishes, of this the Poets say that *Venus* and *Cupid* her son (being pursued by *Typhon* the Gyant, that fearfull enemy of the Gods) leapt into the River, where they were received by two Fishes, which saved them from drowning, for which good service *Venus* translated them into Heaven.

February 1673.

Aries, or the Ram, this is the Ram upon which *Phrixus* and *Helle* his sister, did sit when they fled from their stepmother *Ino*, over the sea of *Hellepont*. The Ram was for his good service translated into Heaven by Jupiter: others say it was the Ram which brought *Bacchus* to the spring of water when he was like to have perished with thirst in the desert of *Lybia*.

Taurus, or the Bull, he was translated to Heaven for a memorial of the Rape committed by *Jupiter* on *Europa* the daughter of *Agenor* king of *Sidon*, whom he stole away in the likeness of a white Bull, and transported her to *Candia*. Others say it was *Io* the daughter of *Inachus* whom *Jupiter* loved, and turned into the form of a Cow.

Cancer, or the *Crab*, this is that *Crab* which bit *Hercules* by the heel, when he fought with the serpent *Hydra* in the *Fen Lerna*, and for his good service was placed in Heaven by *Juno*, the utter enemy of *Hercules*. In this *Constellation* are two stars called the *Asses*, upon which *Bacchus* and *Vulcan* rode to Battle, when the *Gyants* fought with the *Gods*.

Lee, or the Lyon, the Poets say this is that Lyon which *Hercules* overcame in the wood of *Nemea*, and was placed in Heaven in remembrance of so valiant a deed. *Nevidius* saith it was one of the Lyons that were in the den into which *Daniel* was cast, and was placed in Heaven, because of all the rest he was the most friendly unto *Daniel*.

Virgo, or the Virgin, this is affirmed to be Justice, which living sometime with the other Gods upon the earth, did at last forsake the same (by reason of the wickedness which began to multiply therein,) and chose her seat in Heaven. Others say it was *Erigone* the daughter of *Icarus*, whose father being slain by drunken men, for grief hanged her self.

Sun rising.

Sun setting.

Libra or the Ballance, there was formerly but eleven Constellations in the Zodiack, and this being lately added the Poets speak little of it, yet some will have it to be the Ballance wherein Justice (called also *Astræa*,) weighed the deeds of mortal men, and therein presented them to *Jupiter*.

September 1673.

scorpio, or the Scorpion, the story is that Orion being greatly beloved of Diana, made his boast that he was able to overcome any beast bred upon the earth, the earth being moved with his speech, brought forth the Scorpion, whereby Orion was stung to death. Jupiter thereupon translated both the Scorpion and Orion into Heaven.

Sagittarius, or the Archer, some say this was *Greenus*, who was nurie unto the Muses, he was so forward in learning the liberal sciences, and feats of Activity, that the Muses entreated *Jupiter*, that he might have a place in Heaven, to whose request *Jupiter* condescended, and made him one of the twelve Signs, with his hinder part like a horse.

Charles 2	1649	Jan. 30	Long live the King			24	Charles	

The use of this Table is Example.

King Henry 8 began his reign in the year of Christ 1509. April 22. He reigned 37 years 10 months and 2 days. It is since he began his reign 164 years compleat the 22 of April in this year 1673. Now to know the time since the end of his Reign, before his name standing on the right hand, you shall there find 127 years since he died, January 28. And so of the rest.

P O N D

M. DC. LXXIII.

The latter part of this ALMANACK for the year of our LORD GOD

1673.

Being the first after the Leap-year,
and from the Conquest of
England by William Duke
of Normandy 607 years.

Wherein are contained many usefull things,
fitting for a work of this kind with the
Fairs in a larger manner then formerly.

The foregoing Tables explained.

The former Tables perfectly shew the Break of Day, Sun-rising, length of the day, length of the night, setting of the Sun, with continuance of twilight, for the whole year, for the latitude of 52 Degrees, 40 minutes, the use is thus,

In the first, or last Columns, find the moneth, and in the next to them the day, in the which you would know any thing contained in the Tables, if you cannot find the day take the nearest unto it, and right against the same you have the hour and minute of all, under their proper Titles, onely take notice, that the first part of the Table serves for the summer half year, namely from the 10 of March to the 13 of September, and the last part from the 13 of September to the 10 of March, but to make it plain I shall add one example.

The 8 of April I desire to know the time of the day-breaking, sun-rising, and the rest. I find April in the first Column, and in the second the 6 day, and right against the same, under the Column of day-breaking, 2, 4, which sheweth the day breaketh at 2 of the Clock and 4 minutes, in the next 5, 4, which sheweth the sun riseth 4 minutes past 5 in the third is 13 hours 52 minutes the length of the day, in the fourth 10 hours 8 minutes, the length of the night, in the next 6 hours, 56 minutes the time of sun setting, and lastly 9 hours 18 minutes the time when twilight ends, and thus you may proceed at any other time, onely take notice that if you be removed far from the Latitude for which these Tables were Calculated, either north, or south, you will find some error in them.

Pond 1673.

Of the four quarters of the Year, and first of the Spring.

That Glorious Lamp of light, the never resting Sun, upon the 9 of *March*, half an hour after 10 of the Clock at night enters the Equinoctiall sign *Aries*, beginning the Spring Quarter, in which he passeth through *Aries*, *Taurus*, and *Gemini*, and then entring *Cancer* the 1 of *June* 16 min. past 1 in the morning, beginneth the *Astivall*, or Summer Quarter, therein passing through *Cancer*, *Leo*, and *Virgo*, he then entereth the other Equinoctiall sign *Libra* upon the 12 of *September* 26 minutes past four in the afternoon, again making the Days and nights, of equall length as they were in the Spring, passing through *Libra*, *Scorpio*, and *Sagittarius*, entreth *Capricorn* the 11 of *December*, 15 minutes past four in the morning, at which time beginneth the *Hymal*, or Winter quarter, in which passing through *Capricorn*, *Aquarius*, and *Pisces*, returneth to the place where he began (in the Spring) upon the 10 of *March* 1674. The year being like a Ring, beginning again from it self, caused the Egyptians to represent it by a Serpent, holding the end of his Tail in his mouth.

There will not be any Eclipses visible in *England* this year, but in 1674 there will be two of the Moon, of which I shall give you an account in my next.

C 2

A

Pond 1673.

A Table whereby you may find the Golden Number, Epact, Cycle of the Sun, and Dominicall Letter, for 28 years to come, and from thence Easter day.

1698	8	28	27	B		24
1699	9	9	28	A		9
1700	10	20	1	G		March 31

THE former Table is so easie, it needs no explanation, for find but the year of our Lord in the first Column, and right against the same, (under the respective Titles) you may find whatsoever is contained in the Table, wherefore I shall onely give an account from whence those numbers do arise.

The Golden Number is nothing but a periodical Revolution of 19 years; in which time the ancient Astronomers were of opinion that all the Conjunctions and Aspects, of the Sun and Moon did return to the same place in the Zodiack which they were at 19 years before, but this is not exactly true, this Circle is called *Decennovevialis Circularis*, and is called the Golden Number from its excellent use, and because it was written in the Kalender with letters of Gold.

The Epact (never exceeding 30) ariseth from the excess of the Common Solar-year, above the Common Lunar-year, the one containing 365 days, and the other but 354; from which difference (being 11 days) cometh the Epact, which is added to the Lunar-year to make them equal.

The Cycle of the Sun is a Revolutional number of 28 years, in which space of time there is a perfect change of all the Sunday-Letters; so as this Circle was invented not to shew any changes in the Suns motion, but to find thereby the Sunday-Letter for any year proposed.

The Sunday Letter is always one of these seven, A B C D E F G, it sheweth Sunday, or the day of the Sun all the year, but herein observe that in the Bissextile or Leap-years there are two Sunday-Letters, whereof the

1673.

first is to be accounted the Sunday-Letter, from the first of January, to the 24 of February, or Eve of Saint Matthias; and the other from thence to the end of the year.

The Feast of Easter, according to the command of God, was celebrated by the children of Israel, upon the 14 day of the first month Nisan, in the Evening, the beginning of which Moneth was from the New Moon next following the Vernal Equinox; but it is not kept by the Christian Church in the 14 Moon, but on the Lords day following the same, and the Bounds or Limits of Easter, (as it is observed by the English Church) are from March 22, to April 25, inclusive, so that it never falls sooner then the 22 of March, nor later then the 25 of April; the reasons are first, Easter can never be celebrated on the 21 of March, because that is the supposed day of the Equinox, so that the Full Moon in the month Nisan cannot fall before that time; therefore the next Lords day cannot be sooner then March 22.

As for the later Bound, viz. April 25, it is to be noted that the Full Moon in Nisan cannot happen later, then when the 14 Moon of the Moneth Adar falleth on the 20 of March, to which if an intercalary Moneth of 29 days be added, the last Full Moon in Nisan will fall April 18; and because that day may be Sunday, a whole week more is to be added, which may extend to April 25, inclusive.

THE SUNDAY LETTERS are assigned to the days of the week, or the day of the Sun, but herein observe that in the Calendar of the year, the two Sunday-Letters which are assigned to the days of the week, are not always the same, but are changed according to the day of the week, or the day of the Sun, which is the reason of the difference.

Pond 1673

A plain and easie Table shewing the true interest due upon any sum of money from five shillings to an hundred pounds for a year beginning under, after the rate of six pounds in the hundred.

	1 Mon.	3 Mon.	6 Mon.	9 Mon.	A year.
